

队列 (FIFO)

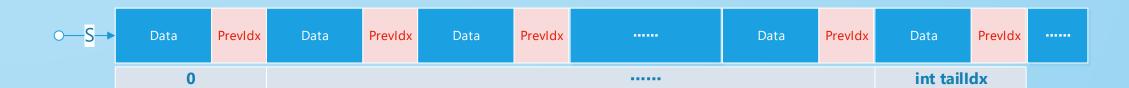

栈的链表实现

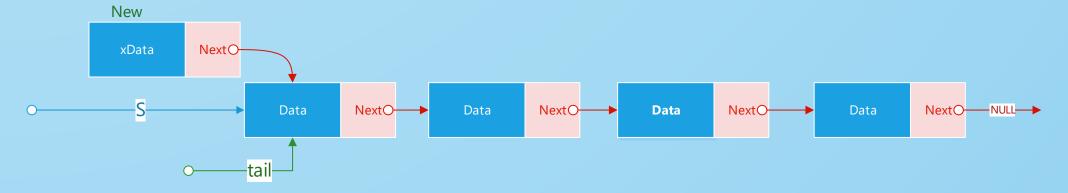

栈的数组实现

【链表】栈 - 压入 (进栈)

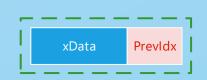

1、用 New 的 Next 保存 tail

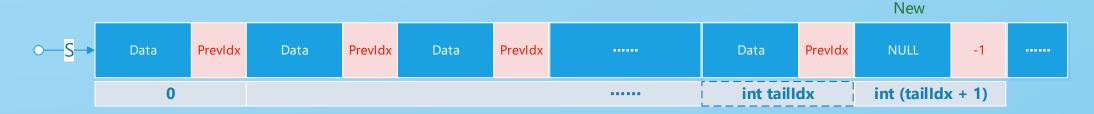

2、再让 tail 指向 New

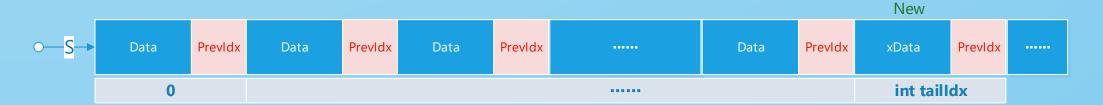

【数组】栈 - 压入(进栈)

1、让 tailldx 加 1,空出新的节点空间

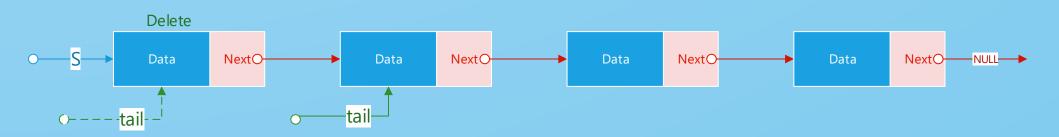

2、让 nodes[tailldx] 保存 New

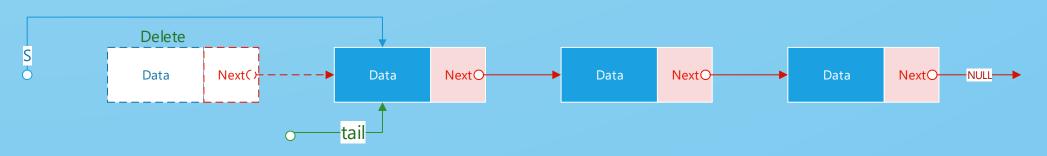

【链表】栈 - 弹出(出栈)

1、用 Delete 保存 tail,再把 tail 指向 tail 的 Next

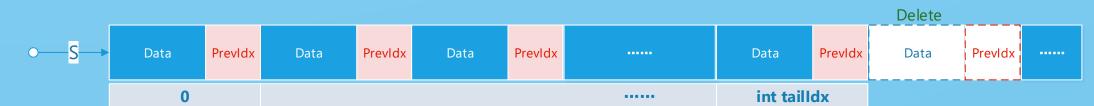

2、释放 Delete 指针

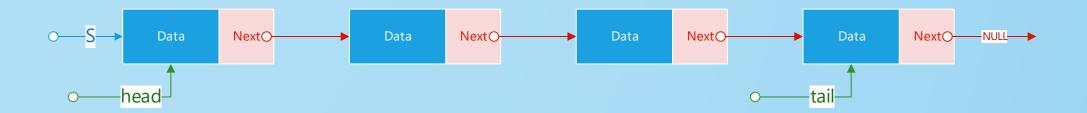

【数组】栈 - 弹出(出栈)

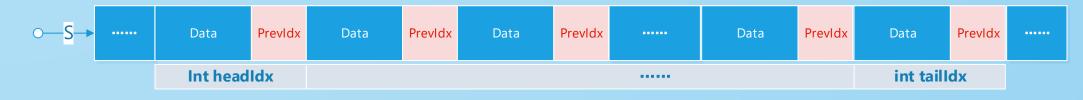

队列的链表实现

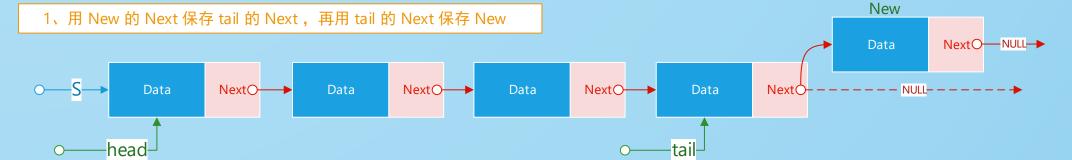

队列的数组实现

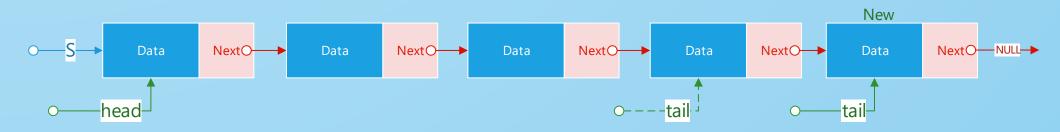

【链表】队列 - 入队

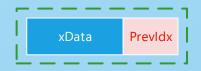

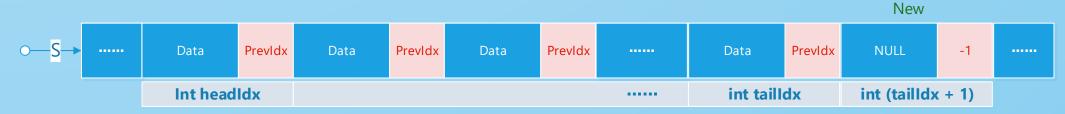

1、再把 tail 指针指向 New

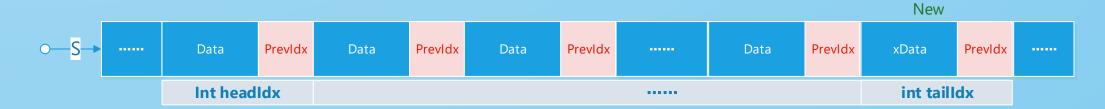

【数组】队列 - 入队

1、让 tailldx 加 1, 空出新的节点空间

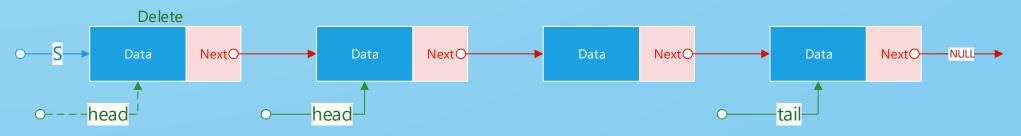

2、让 nodes[tailIdx] 保存 New

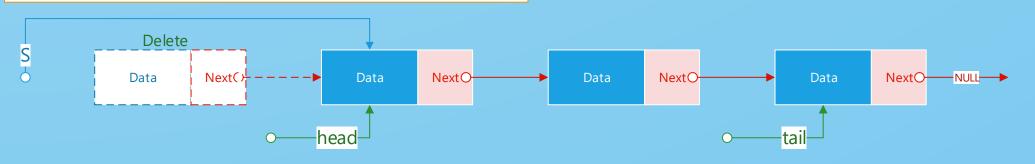

【链表】队列 - 出队

2、释放 Delete 指针

【数组】队列 - 出队

1、让 headldx 加 1, 空出原来的节点空间
